## A car that can take a whole lot of crap

The new Skoda Octavia Scout is made to take a lickin' and keep on tickin'. To prove that, DDB and B-Reel set one up by the Swedish Archipelago, where weather is unpredictable, and let visitors of the website curse - each curse resulted in a certain amount fertilizer being catapulted onto the car. The amount was dictated by the contents of the curse - swear words, etc.

The project was from a technical standpoint, a pretty complicated one. At the site, there was no electricity or Internet connectivity.

Being able to stream from remote areas is a common request that Rackfish has been experimenting with for many years. Our present solution is a router that bonds up to four 4G sticks with Wifi and ethernet WAN (if available).

Bonding means that all available internet connections are tied together, so that we get the capacity of 4 times the 4G capacity. It also means that we can combine different 4G providers for increased availability in areas where not all providers work.

The data from the weather proof network cameras is split and sent in pieces over the different connections and the re-assembled in our datacenter, encoded and distributed.

## Webpage speedup, caching and security

**Rackfish now introduces a line of products that gives your site increased security and faster load times! In short all static content of your website is cached by a network of servers around the world, making it snappy and fast from anywhere around the globe!**

With this comes a myriad of security possibilities. Most important is probably CMS Protection who screens visitors that are trying to use exploits on CMS's like Wordpress, Joomla, Drupal or Magento CMS. So if you have a site built upon one of these platforms you should definitely look into our new product.

more data to be cached and also protection against DDoS-attacks and more. If your site uses a CMS, has clients from different parts of the world or needs to be sped up, you should try this product out. Contact us to get a month free testing; we will set it up for you and give you access to valuable data about your site, and your visitors and threats. Packages available from 149 SEK / 15 € / \$20 per month!

The more advanced packages allow more domains,
